3D CME reconstruction using GCS method

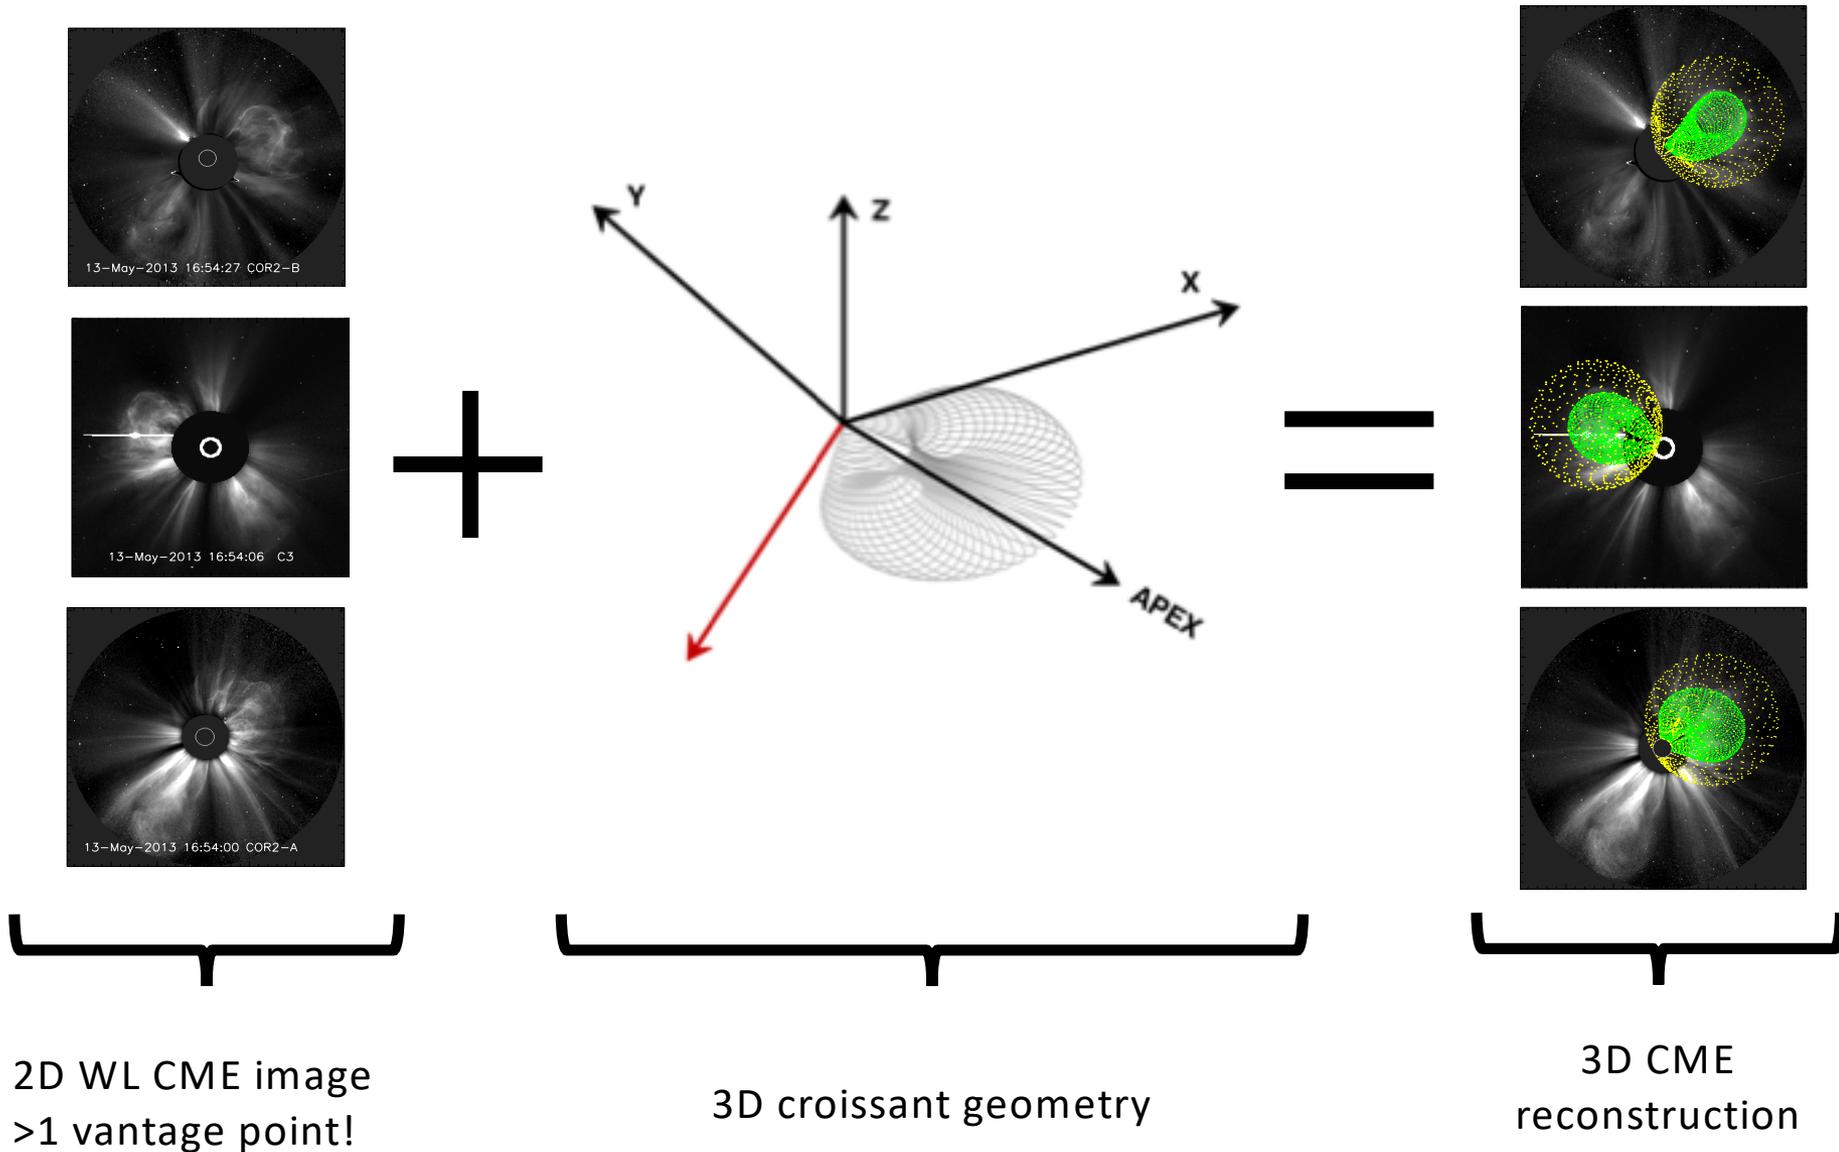

Mateja Dumbovic

Institute of Physics, University of Graz

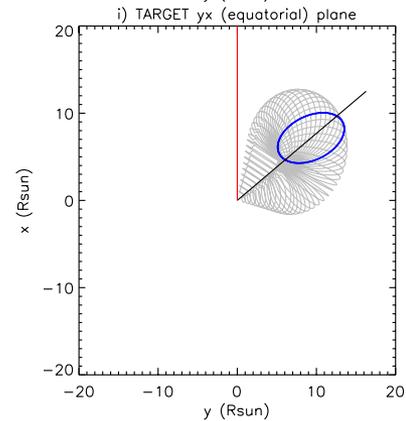

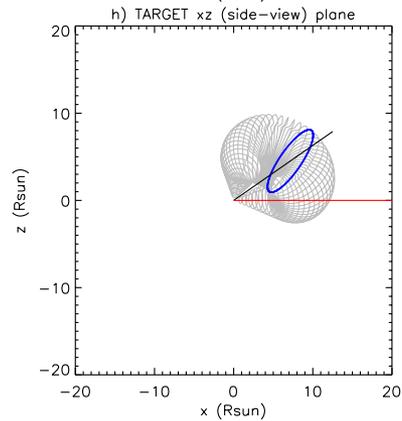

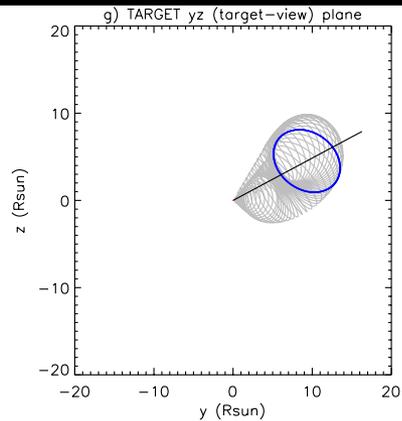

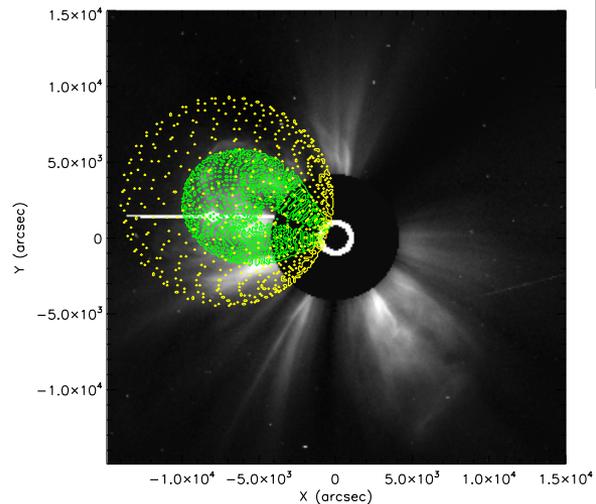

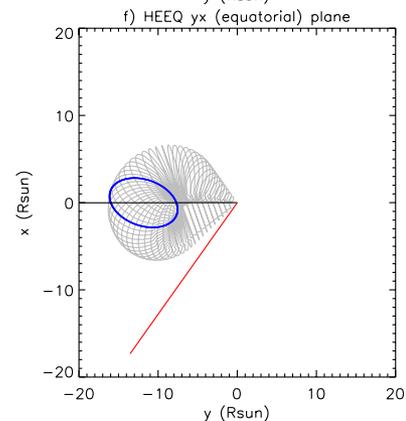

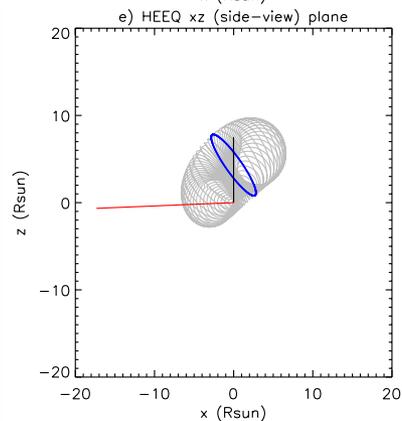

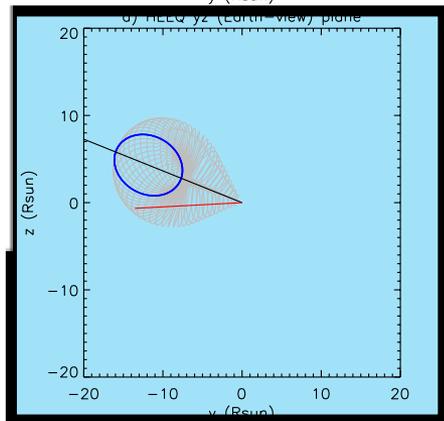

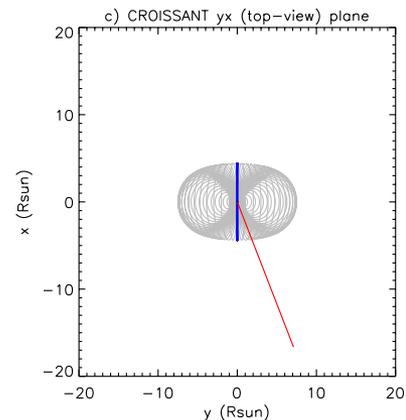

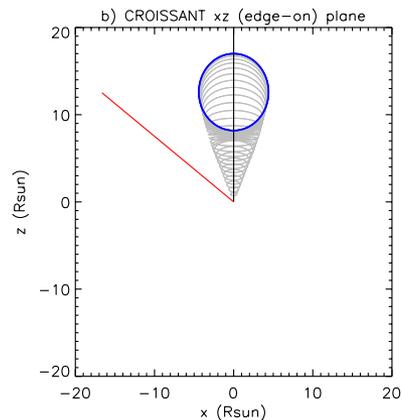

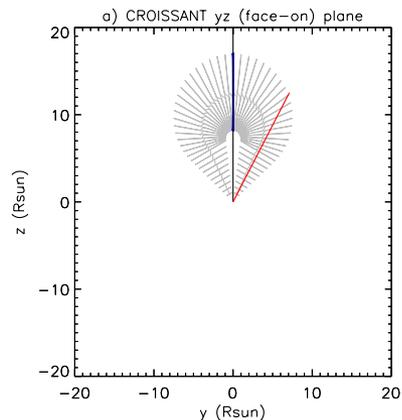

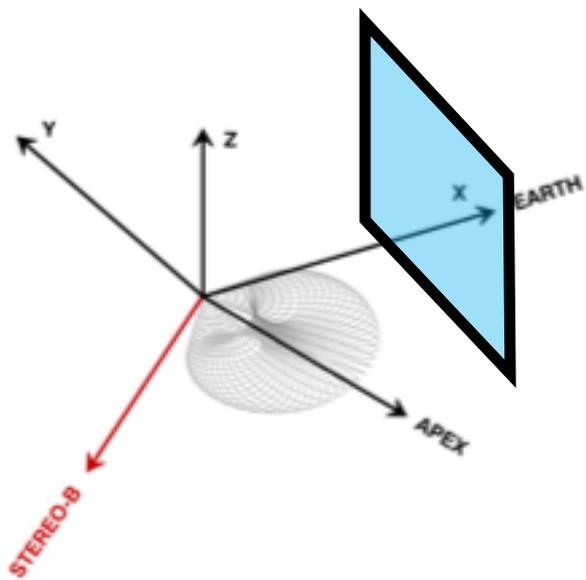

GCS=Graduated Cylindrical Shell

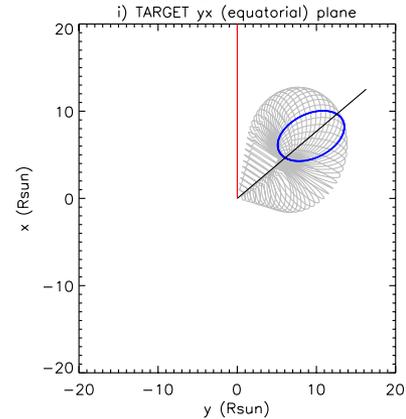

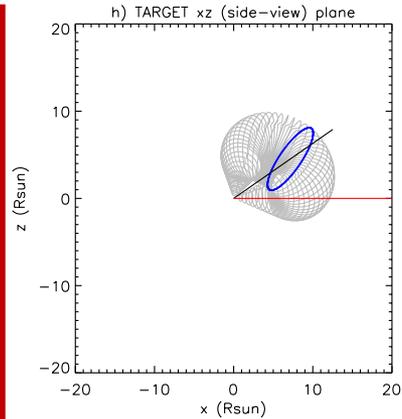

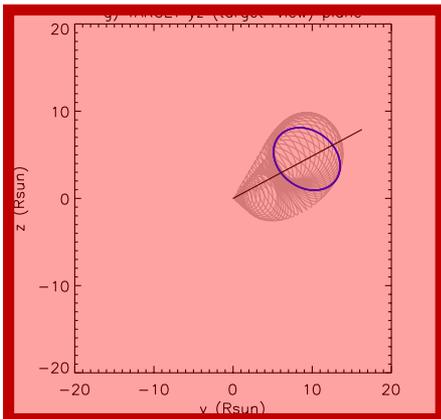

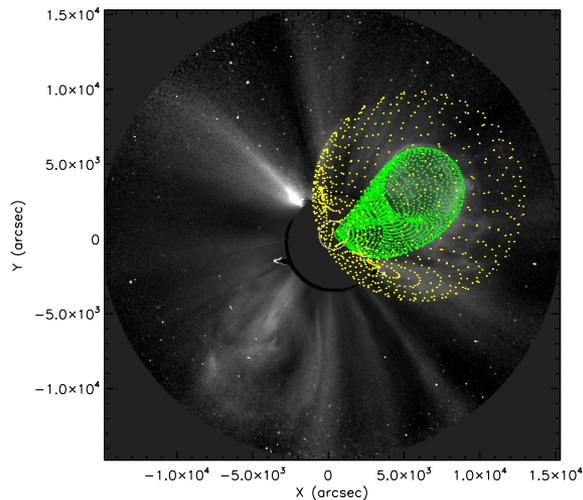

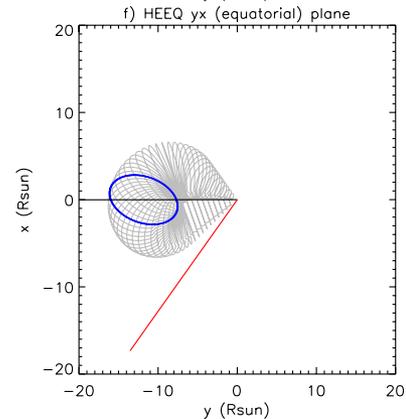

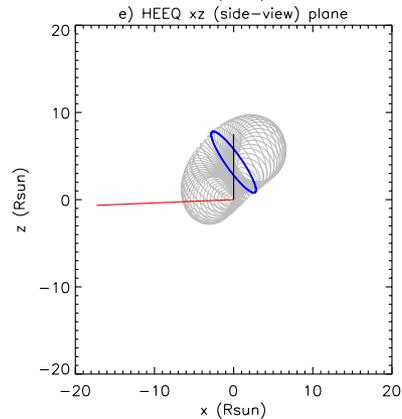

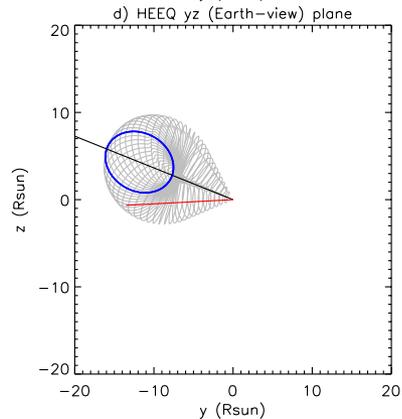

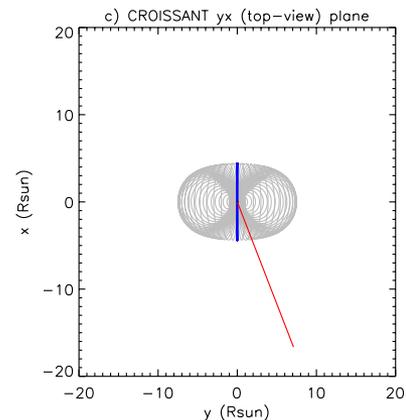

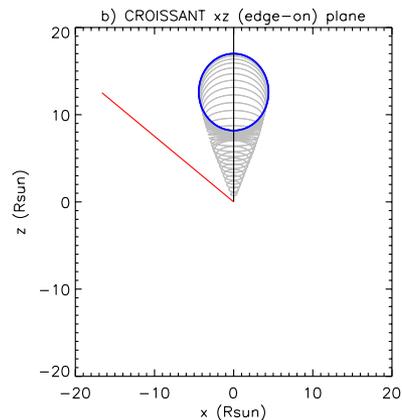

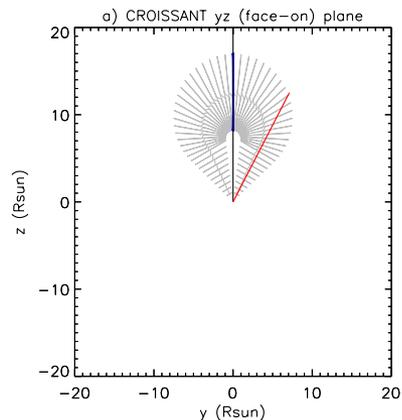

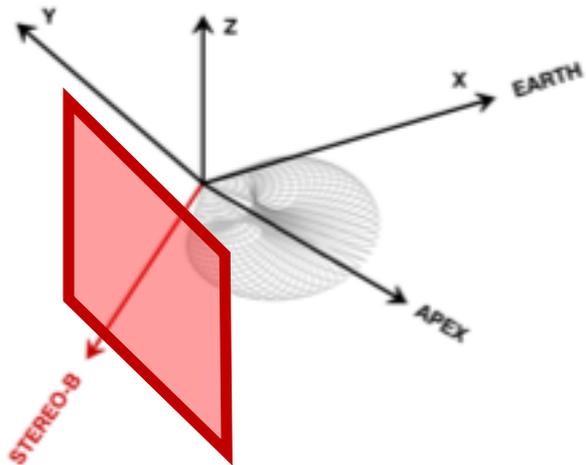

Thernisien+2006,2009; Thernisien2011

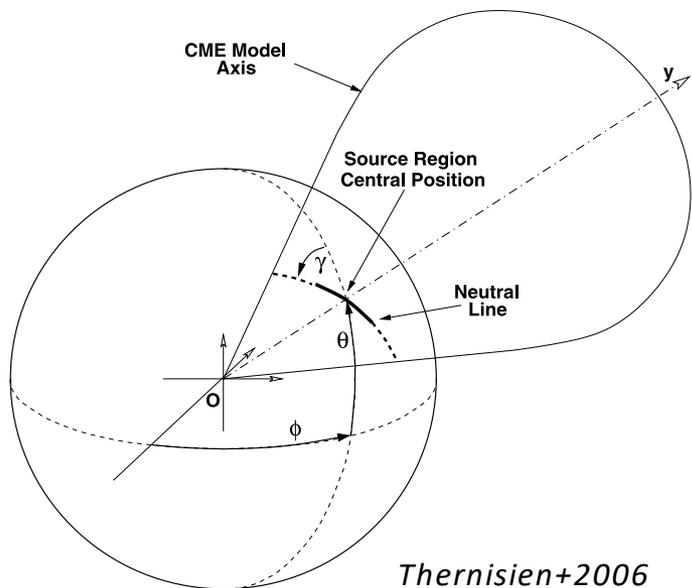

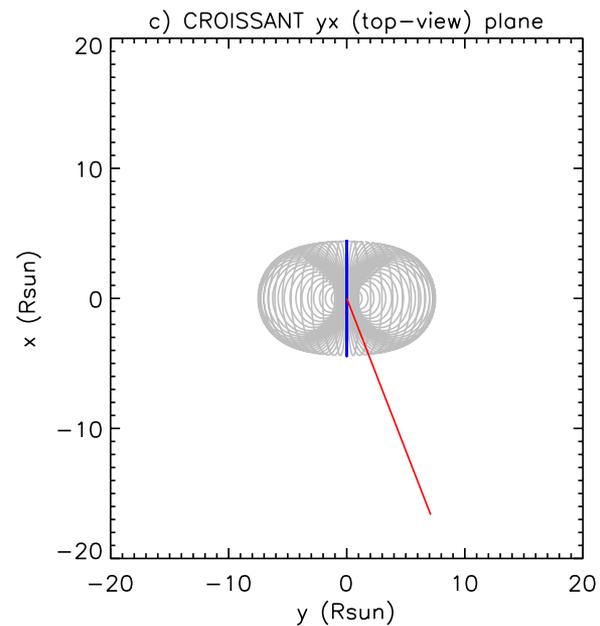

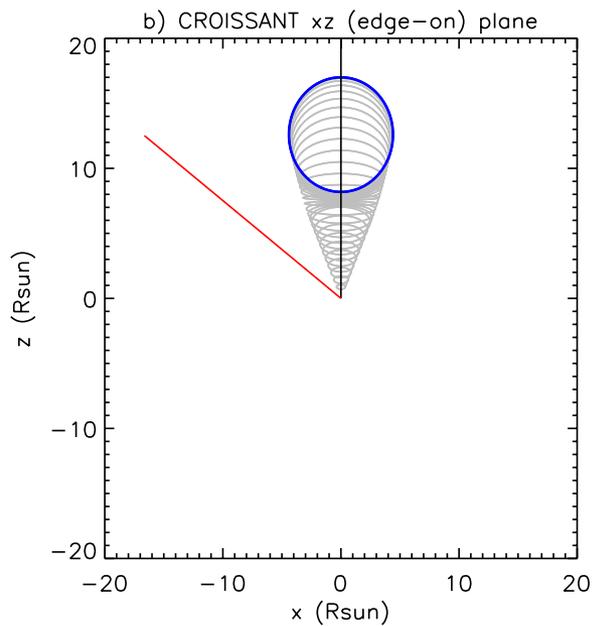

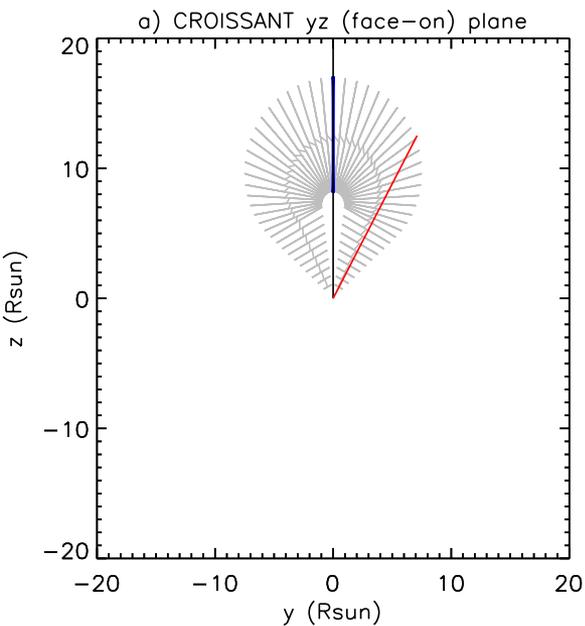

3D CROISSANT → 2D IMAGES

3D CROISSANT → 2D IMAGES

CROISSANT SYSTEM

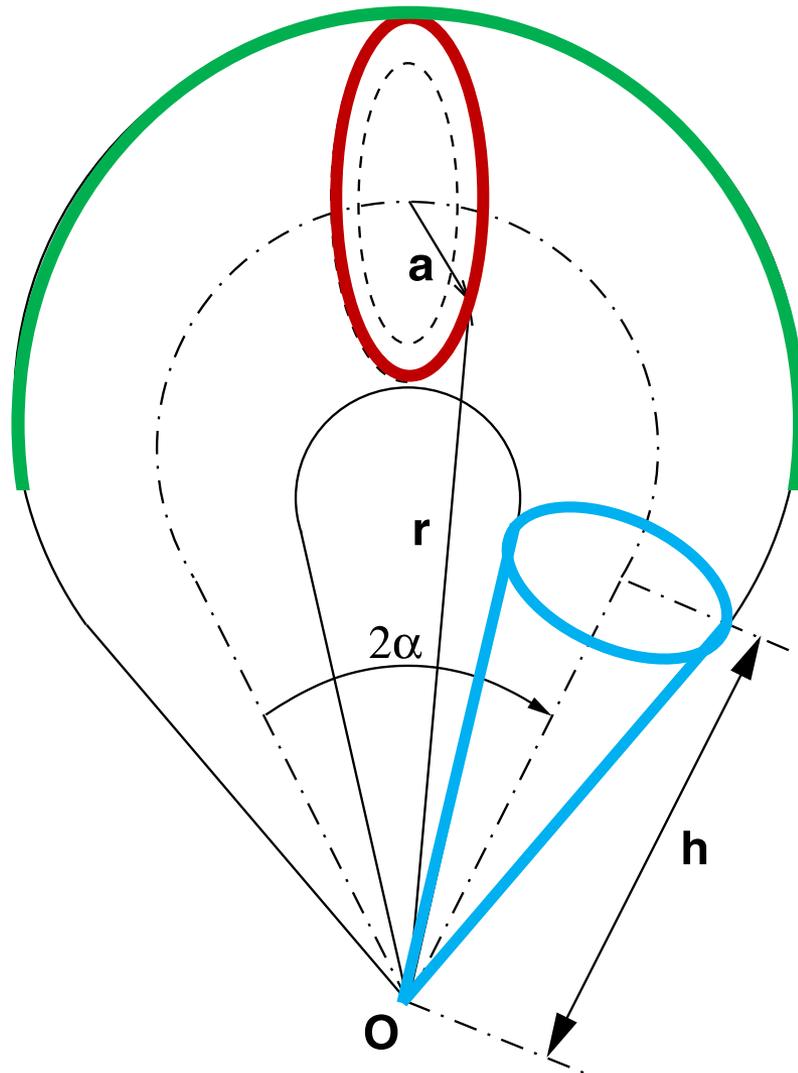

1st axis is apex direction

2nd axis is the direction of FR axis @ apex

Origin @ the center of the Sun

THE CROISSANT GEOMETRY

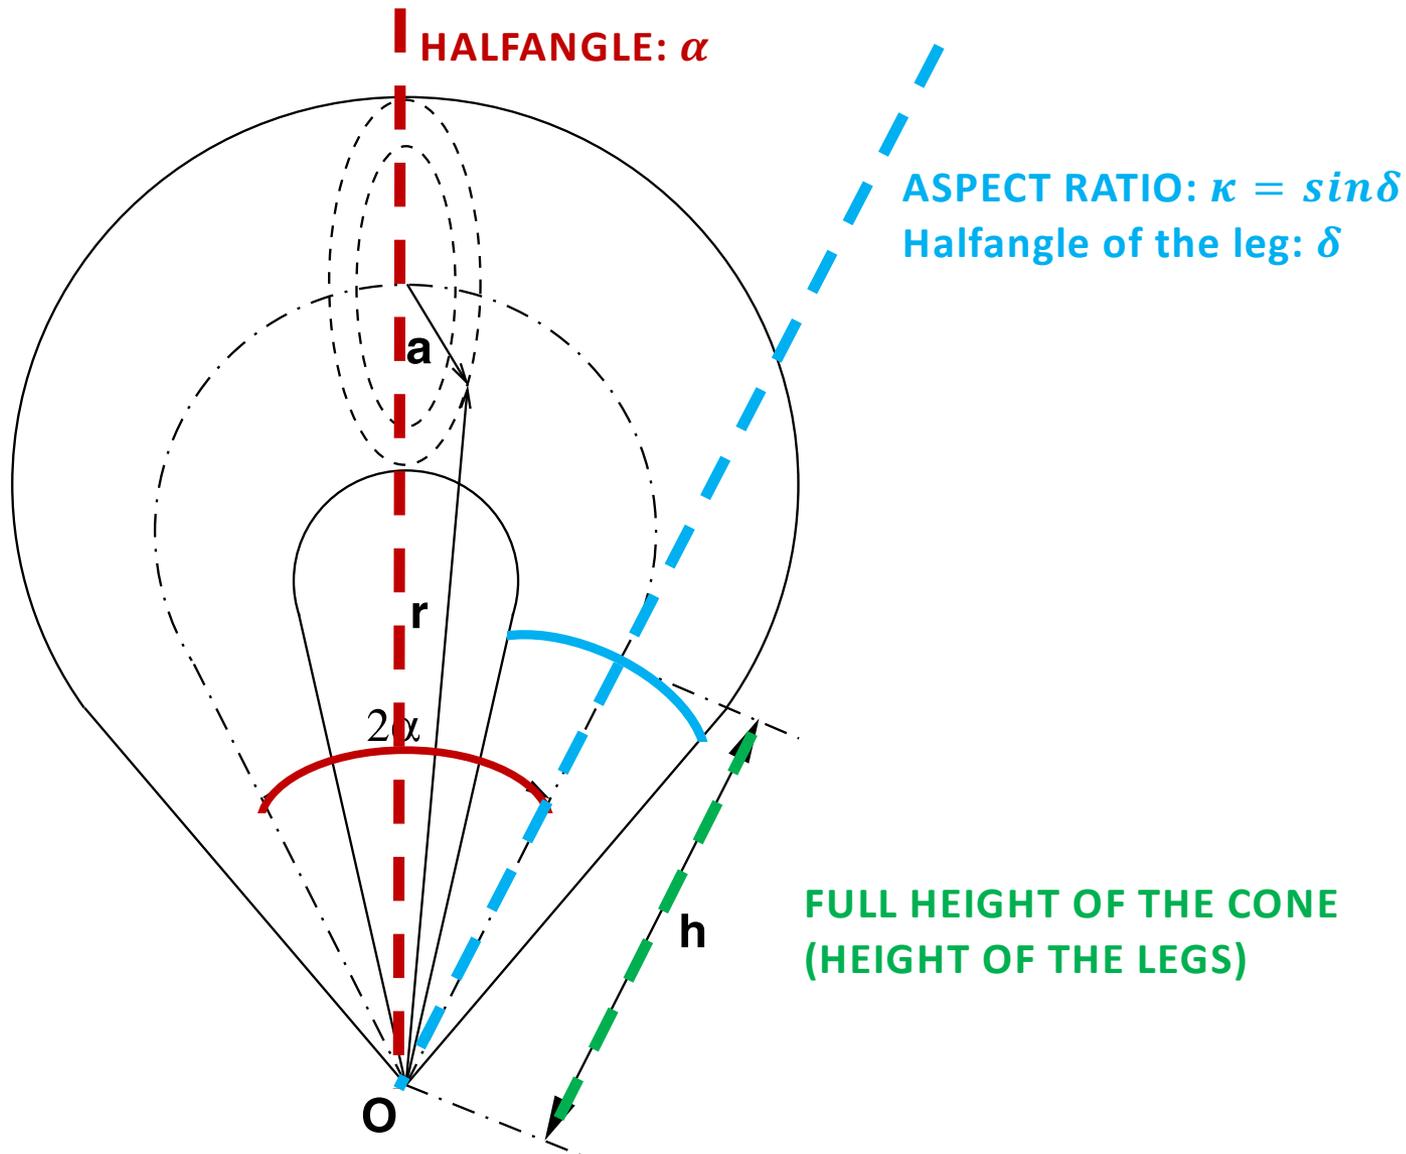

→ HOLLOW CROISSANT

→ CONICAL LEGS

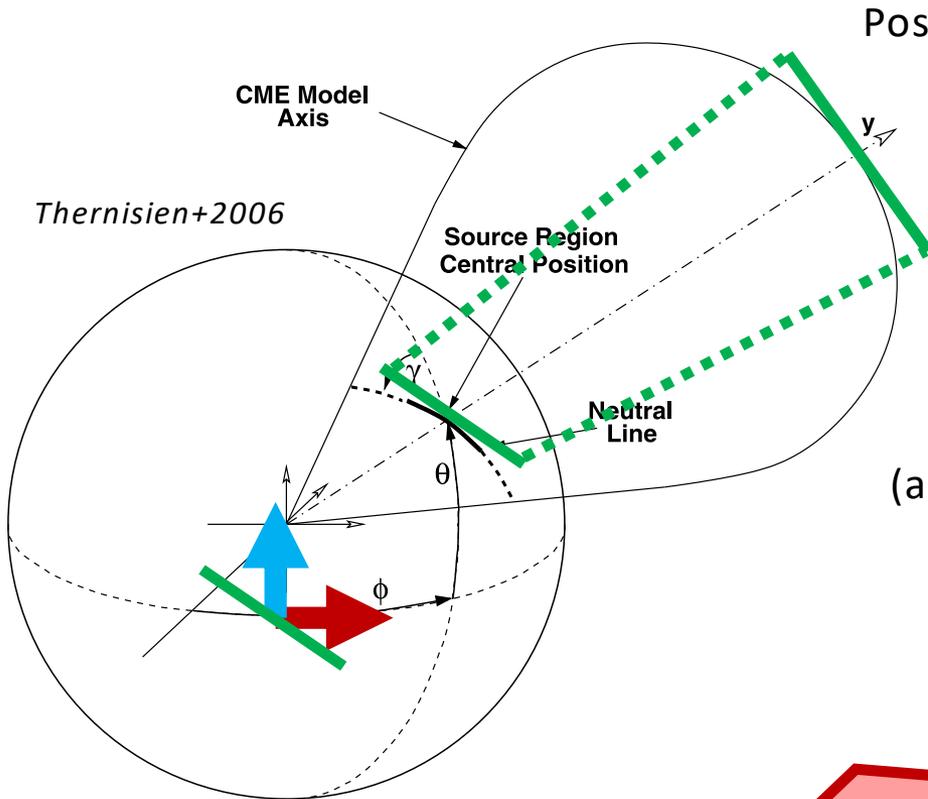

→ CIRCULAR CROSS SECTION

→ PSEUDO CIRCULAR FRONT

THE CROISSANT GEOMETRY

THE CROISSANT POSITION

Position of the apex in spherical coordinate system:

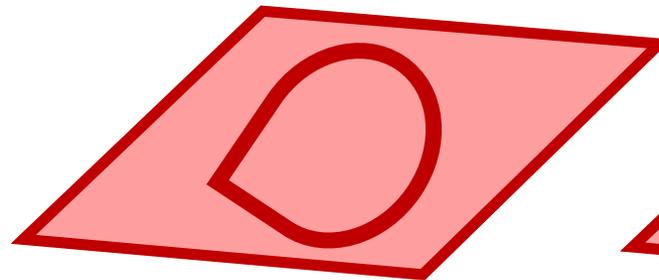

Latitude [-90,90]

Longitude [0,360] (Stonyhurst or Carrington)

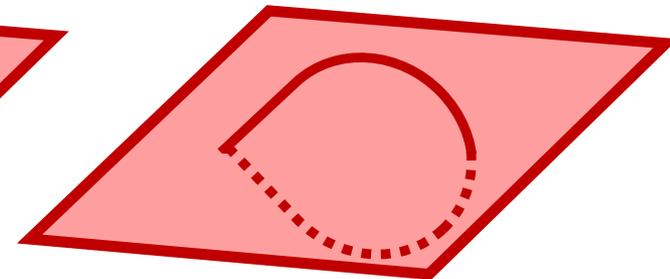

+

Tilt

(angle of the front with respect to solar equator)

in equatorial plane
tilt=0

Perpendicular to equatorial plane
tilt=90

EXAMPLE CME
2014 February 12
