Over the last three decades, solar physicists in both Europe and China have worked together on a large variety of topics in various ways, yielding fruitful achievements and success. In order to broaden the collaborations and to exchange scientific results between Chinese and European solar physicists, the series China-Europe solar physics meetings was introduced every 2 or 3 years in China and Europe alternatively.

Following the success of the first meeting held in China (CESPM 2017, Kunming, Yunnan) we are organising the 2nd meeting in Hvar aiming to strengthen the collaboration between European and Chinese scientists, in particular among young scientists. We believe it will not only help development of solar physics in China and Europe, but will greatly contribute to the development of solar physics world-wide as well.

Please note that CESPM 2019 meeting is open to scientists from all countries.
