

From April 8 to 13, 2018 Bojan Vršnak attended the International Team Meeting of the team Manuel Luna: "[Large-Amplitude Oscillations as a Probe of Quiescent and Erupting Solar Prominences](#)", held at the [International Space Science Institute \(ISSI\)](#) in Bern, Switzerland. Bojan Vršnak tasks were related to the oscillations of prominence-carrying magnetic flux ropes, implications for the stability and loss of equilibrium. He also gave a talk on physical background of prominence oscillations entitled "[Coronal and Prominence Diagnostics based on Prominence Oscillations](#)".
